Experiment → 1

Aim → To design an ER diagram for an Indian E-commerce platform containing entities customer, product, order, order time, seller category, payment, Delivery and Address.

Theory → An entity relationship (ER) model is a conceptual representation of data used in database design. It provides describes entities, their attribute and relationship among them.

Key components-

i) Entity → Real world object represented by [ ]

ii) Attribute → Property of an entity

iii) Primary key → Uniquely identifies an entity.

iv) Weak entity → Entity that depends on another.

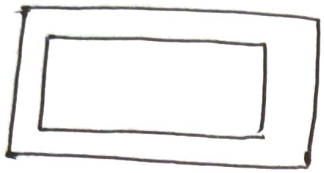

v) Relationship → Association between entities.

vi) Specialization → Dividing an entity into subclass.

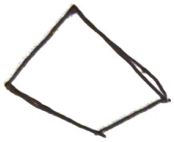

Notation Used :-

→ Strong Entity

→ Weak Entity

→ Relationship

→ Attribute

→ Multivalued Attribute

→ Composite Attribute

→ Key Attribute

→ Partial key

Constraint –

Customer – order → Total on order

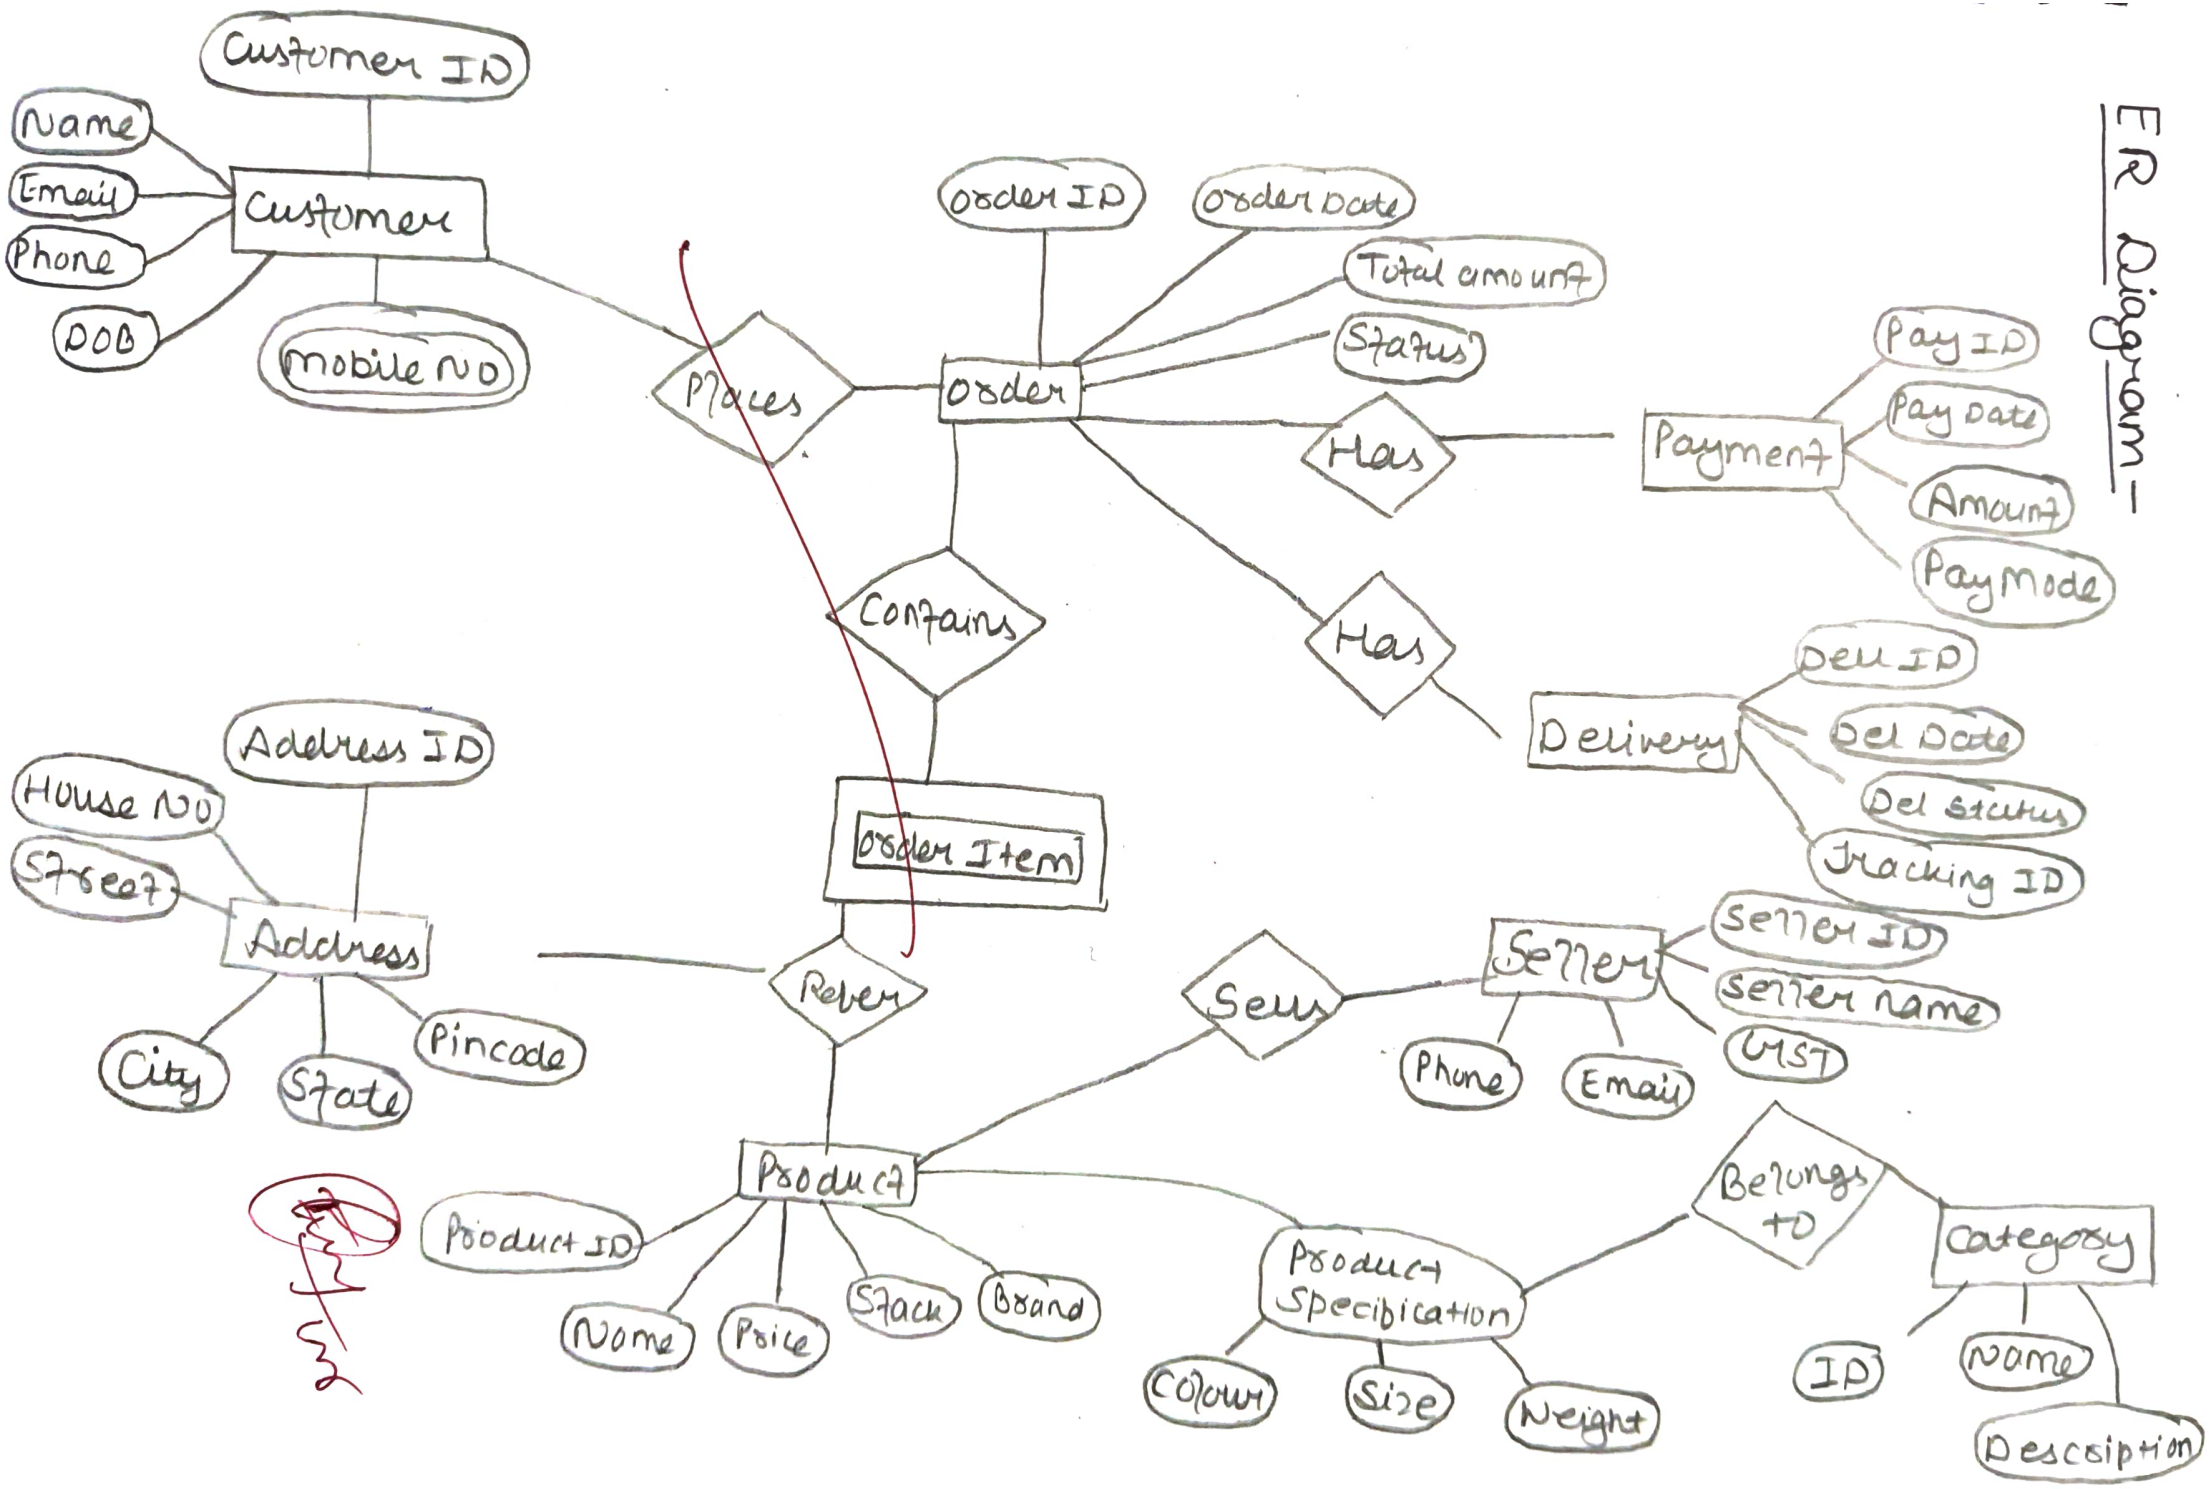

order – orderitem → Total on order item

Seller – Product → Total on product

Product – Category → Total on Payment category

Order – Payment → Total on Delivery Payment

Order – Delivery → Total on Delivery
